

Northwest Pipe Company Supplying Water Transmission Pipe for a Landmark Water Reclamation Project in Southern California

Pipe will transport recycled water for the San Diego Pure Water Project that will provide safe drinking water for the City.

VANCOUVER, Wash., July 29, 2021 [/PRNewswire/](#) -- Northwest Pipe Company (Nasdaq: NWPX), an industry leader of engineered pipeline systems for water infrastructure, has been selected to supply pipe for the Pure Water San Diego project. This sustainable and environmentally-conscious project is a phased, multi-year program that will provide more than 40% of San Diego's water supply by the end of 2035.

The City of San Diego is utilizing proven water purification technology to clean recycled water and produce safe, high-quality drinking water while reducing the amount of treated water discharged into the ocean. This cost-effective treatment will provide a reliable, sustainable water supply and reduce the City's dependence on imported water.

Northwest Pipe Company will be manufacturing steel pipe for the North City Pure Water Pipeline, which is a critical component of Phase 1. When complete, the 7.54-mile pipeline will transport 30 million gallons per day of recycled water from Morena Pump Station to the Miramar Reservoir, where it will mix with imported and local water. The City will treat the water again before use.

The Company is using over 3,220 tons of steel to manufacture the 48-inch diameter engineered steel pipeline. The pipe features cement mortar lining and cement mortar coating with a polyethylene tape wrap. Long Beach-based W.A. Rasic Construction is the installation contractor for this segment.

"Northwest Pipe is excited to be part of this environmentally conscious water recycling project," states Scott Montross, President and CEO of Northwest Pipe Company. "This project reduces ocean discharge and increases water reuse, and we believe we will be seeing more projects with this type of purification process. We are proud to be supplying pipe for the San Diego Pure Water project."

About Northwest Pipe Company – Founded in 1966, Northwest Pipe Company is a leading manufacturer for water related infrastructure products. In addition to being the largest manufacturer of engineered steel water pipeline systems in North America, the Company produces high-quality precast and reinforced concrete products, Permalok® steel casing pipe, bar-wrapped concrete cylinder pipe, as well as linings, coatings, joints, and one of the largest offerings of fittings and specialized components. Northwest Pipe Company provides solution-based products for a wide range of markets including water transmission and infrastructure, water and wastewater plant piping, structural stormwater and sewer systems, trenchless technology, and piping rehabilitation. Strategically positioned to meet growing water and wastewater infrastructure needs, the Company is headquartered in Vancouver, Washington, and has manufacturing facilities across North America.
